

Lists in HTML

Types of Lists

HTML supports three main types of lists:

1. **Unordered List** – Bulleted list
 2. **Ordered List** – Numbered list
 3. **Description List** – List of terms and their descriptions
-

Unordered List

Use the `` tag for unordered lists. Each item goes inside an `` tag.

```
<ul>
  <li>Apples</li>
  <li>Bananas</li>
  <li>Oranges</li>
</ul>
```

This will display:

- Apples
 - Bananas
 - Oranges
-

Ordered List

Use the `` tag for ordered lists.

```
<ol>
  <li>Wake up</li>
  <li>Brush teeth</li>
  <li>Go to work</li>
</ol>
```

This will display:

1. Wake up
 2. Brush teeth
 3. Go to work
-

Description List

Use the `<dl>` tag for description lists. Terms go inside `<dt>`, and descriptions go inside `<dd>`.

```
<dl>
  <dt>HTML</dt>
  <dd>A markup language for creating web pages.</dd>

  <dt>CSS</dt>
  <dd>Used for styling HTML pages.</dd>
</dl>
```

Nesting Lists

You can put one list inside another.

```
<ul>
  <li>Fruits
    <ul>
      <li>Apple</li>
      <li>Mango</li>
    </ul>
  </li>
  <li>Vegetables</li>
</ul>
```

Tip

- Use unordered lists for things without order (like a shopping list).
- Use ordered lists when the **sequence matters**.
- Use description lists for definitions or Q&A-style content.
